UPS Product Update

Riazzino, 16th May 2006

Dear Customer,

We are pleased to announce the reinforcement of the 'Clean Input' message for the LP33 40-120kVA UPS range, highlighted during a recent technology review of the series' characteristics.

The product range is available in two versions:

LP33 40-120 Active IGBT rectifier with a THDi of <9%

This is equivalent to the previous description of LPXX-33 input current THDi <10%

LP33 40-120 Active IGBT rectifier Clean Input Module with a THDi of <4.5% (<3.5% @ 75% load)

This is equivalent to the previous description of LPXX-33 current THDi <5%

Some key benefits of the LP33 40-120kVA range include:

- 'Clean input' Active IGBT rectifier technology
- Transformerless design
- Standard EMC Class A

With these features, the product range is suitable to support and protect many critical applications, from medical to datacenters and telecommunication.

Full support data, including a sales presentation and updated technical data sheet, are attached also with this update.

Do not hesitate to contact your Area Sales Manager or the Product Marketing team if you have any queries or require further details.

Kind regards,

Product Marketing
