### Summary

Effect Whistle with a rotating Turbine Drum

[Gadgets](#) > [Audio](#)

Tags: [whistle](#) [turbine](#) [rotor](#)

This is a funny whistle which combines the principle of a turbine with a air raid siren.

this model has almost no sense but to be fun :)

it gets better over time due to the grinding of the seams on the barrel

a bit of silicone spray in the gap of the barrel helps aswell

unfortunately, the air consumption is pretty high - you'll need good lungs

#### **Attention:**

Your printer **MUST** be able to maintain a clear gap of 0.2mm - otherwise the barrel won't rotate

#### **HINT:**

This Model is really just for fun because i like it and it's a cool principle.

BUT if i print 3 Whistles, one works well, one does not - all work "sort of"... but it's not consistent.

If your first print is not that good or consumes much air - just give it another try.

Version: T4 (Turbine 4)
