With this modular round shelving system, we're continuing the concept introduced with the hexagonal set. It's a versatile system that can be customized in countless ways using nine different individual modules.

Each shelf unit can be mounted to the wall using the two integrated tabs with drill holes. I believe this system works beautifully not only in living spaces, but also in entryways, children's rooms, or kitchens. I'm excited to see your creations!

The standard dimensions for each module are 245 mm in diameter and 90 mm in height. Of course, you can scale them to suit your specific needs.

## I printed the models using the following settings:

- Layer height: 0.24 mm
- Walls: 2
- Infill: 15% (grid)
- Filament used: Sunlu PLA+ “Black” → Link: <https://amzn.to/48CT19i>

Since the weight varies depending on the model, listing all individual weights wouldn't be particularly useful.

All nine models are included in the project files. You can print individual build plates or the entire set, depending on your preference.
