Hello everyone! We have exciting new products for you. With the plant repotting season arriving, we've prepared something special. We've designed three plant support models in the popular "Bøje" style! They are modular and customizable to any height. Each model offers two base options. All designs can be easily printed in any scale! Simply resize them to the scale you need! Just look at how beautiful they are! The organic shape easily complements any plant arrangement, blending elegance with a touch of futuristic design.

For better print results:

- **Layer height 0.2**
- **preferred support (tree organic)**

Filament of example - **eSun PLA+ - white**

We create a separate collection for convenience, so if something catches your eye, feel free to dive into it for even more exciting content !

Enjoy ;)
